

Meta Ad Performance Analysis

DASHBOARD INSIGHTS

KPI Metrics

- **Campaigns:** 50 — Total number of ad campaigns running in the period.
- **Impressions:** 24,980 (~27K) — Total times ads were shown. Solid reach for a 50-campaign portfolio.
- **Clicks:** 3,068 (~3K) — Number of people who clicked on the ads.
- **Likes:** 911, **Comments:** 365, **Shares:** 164 — Organic engagement signals beyond paid reach.
- **Purchases (Conversions):** 146 — Real customer acquisitions from ads.
- **Users Reached:** 817 — Unique users engaging with the campaigns.
- **Engagements:** 4,508 — Sum of clicks, likes, comments and shares.
- **Click Rate (CTR):** 10% — Well above the typical 1–2% industry benchmark. Ads are highly attractive.
- **Engagement Rate:** ~18.1% — Very healthy; content clearly resonates with the audience.
- **Conversion Rate:** ~4.8% — Of all clicks, roughly 4.8% converted into purchases — decent, but landing-page optimization could lift this further.
- **Purchase Rate:** 0.5% — Of all impressions, only 0.5% resulted in a purchase. Low conversion-funnel efficiency; room to optimize.
- **Avg. Budget per Campaign:** \$65K — Consistent per-campaign spend across the portfolio.
- **Total Budget:** ~\$3.25M — Calculated as 50 campaigns × \$65K average spend.

***Insight:** Ads are performing strongly in visibility and engagement, but actual purchase efficiency is weak — the same pattern as a classic top-of-funnel win paired with a bottom-of-funnel drop-off. High CTR (10%) and Engagement Rate (~18.1%) show the creatives, messaging, and targeting are landing well: people are interested enough to click, like, share, or comment. But a Purchase Rate of just 0.5% (146 purchases out of 24,980 impressions) shows a sharp fall-off once people reach the landing page or checkout — awareness and interest are strong, but the final action (purchase) is comparatively weak.*

Engagement Breakdown

By Target Gender (Donut Chart — Count of ad_id by target_gender)

Female-targeted ads make up the largest share of the 71 unique ad IDs, with Male-targeted ads forming a meaningful second segment and a smaller "All / unspecified" group rounding out the total. Female audiences are the dominant engagement driver, so campaigns skewed toward women are likely to see the best return.

By Target Age Group (Donut Chart — Count of ad_id by target_age_group)

The 25–34 bracket accounts for the largest slice of targeted ad IDs, with the 18–24 group close behind. This is reinforced by the **Engagements by user_age** histogram, which peaks in the mid-20s to early-30s range and tapers off steadily for older age bands. Primary audience: young adults, roughly 18–34.

***Insight:** Target ads toward Females aged 18–34 for the strongest ROI — this segment shows both the highest ad concentration and the highest organic engagement.*

Analysis by Ad Type

The **Count of ad_id by ad_type** chart shows campaigns spread fairly evenly across all four formats — Stories, Carousel, Image, and Video — each accounting for roughly a quarter of the 50 campaigns, with no single format dominating volume.

***Insight:** Because spend and volume are evenly split across formats, the next step is to break down CTR, Purchase Rate, and Conversion Rate per ad type (the way the reference dashboard does) to see which format is actually most efficient, then shift budget toward the top performer(s) rather than keeping an even split.*

Geographic Distribution

The country map and the country filter panel point to the United Kingdom as a clearly highlighted, high-activity market, with Australia and Brazil also present as active markets in the dataset (visible as selectable country filters alongside the map).

***Insight:** Prioritize spend in the UK given its visibly higher concentration on the map, while keeping Australia and Brazil in the mix as secondary growth markets. Filtering the dashboard by each country individually will confirm which of the three delivers the best Purchase Rate and CTR before reallocating budget.*

Time-Based Trends

Weekly Engagement Trend (Engagements and Total Impressions by Week)

Engagement and impressions stay fairly flat and consistent week over week, with no sharp spikes or drop-offs. Steady performance suggests the campaigns are maintaining attention over time rather than fatiguing quickly.

Engagements by Ad Platform and Time of Day

Engagement is distributed across Morning, Afternoon, and Evening in broadly similar proportions across platforms, without one time slot dominating — a more even spread than a typical single afternoon/evening peak.

***Insight:** Because engagement is steady across the week and reasonably balanced across day-parts, there is less urgency to concentrate spend into a narrow scheduling window — but a closer look at the Friday/Monday day-of-week filter (available on the dashboard) could reveal whether specific days still outperform others.*

Campaign-Level Table (Bottom-Right Table)

Metric	Total (all 50 campaigns)
Impressions	24,980
Clicks	3,068
Likes	911
Comments	365
Shares	164

Purchases	146
Purchase Rate	0.5%
Click Rate (CTR)	10%

Individual campaigns follow a naming pattern indicating launch phase and season (e.g. Campaign_1_Launch, Campaign_09_Winter, Campaign_18_Summer, Campaign_11_Q3), suggesting a structured, recurring campaign cadence rather than one-off ad pushes. Per-row Purchase Rates and Click Rates vary noticeably around the 0.5% / 10% averages, meaning a handful of campaigns are quietly outperforming the rest and are worth isolating for a closer look.

Final Insights & Recommendations

- 1 Strong awareness and engagement (10% CTR, ~18.1% Engagement Rate), but low purchase-funnel efficiency (0.5% Purchase Rate) — the priority is a better conversion strategy, not more top-of-funnel spend.
- 2 Target audience: skew campaigns toward Females aged 18–34, the segment with both the highest ad concentration and highest engagement.
- 3 Ad formats: spend is currently split evenly across Stories, Carousel, Image, and Video — pull per-format CTR/Purchase Rate/Conversion Rate to identify the actual top performer(s) and shift budget accordingly.
- 4 Geography: the UK stands out as the most visibly active market on the map; treat Australia and Brazil as secondary markets to validate before scaling.
- 5 Timing: engagement is steady across weeks and reasonably even across morning/afternoon/evening — check the day-of-week filter (Friday vs. Monday) for any day-level pattern before committing to a tighter schedule.
- 6 Budget optimization: with a \$65K average spend per campaign (\$3.25M total across 50 campaigns), reallocating even 10–15% of budget from flat-performing formats/geographies toward top performers should meaningfully lift overall Purchase Rate.
- 7 Action: improve landing pages, offers, and retargeting to close the gap between the strong 10% CTR and the weak 0.5% Purchase Rate.
